

# TAKE ACTION HAIL & SEVERE STORM

▶ **Following ANY high wind or hail event, have a roofer inspect the roof for any damages.**

## WHEN:

Immediately following the storm, once local authorities have confirmed it is safe to return to the site.

## WHY:

Following any significant property event, it is CRITICAL that you perform a thorough inspection of your premises for any storm related damage. Many times, roof damage is not detected until an actual leak inside the premises occurs which can be years following a storm which places your insurance coverage in peril.

## HOW:

If your professional roofer deems there is damage, ensure the roofer accompanies the adjuster when they inspect the roof. The purpose of this is to ensure the roofer and adjuster agree on a scope of damage which avoids disputes later.
